State of AI in Europe

The Invisible Giant

March 2026

Fabricio Bloisi

CEO

prosus

“Europe is at a crossroad in the global AI race, but we are too slow. We have world-class talent, yet without fast, major investment in our own compute and open-source models, we risk dependence on others. The countries and companies that move now will define the next decade.

Europe is changing, but things are not moving fast enough. Let's build as if Europe's future depends on it—because it does.”

State of AI in Europe: Executive Summary

1. The AI window is open. It won't stay open forever. AI is reshaping the global economy at a pace the world has never seen. The countries and companies that move now will define the next decade. Those that hesitate will spend it catching up. Europe is at that inflection point - right now.

2. Europe has everything it needs to win. Except urgency and courage. World-class talent. A massive, AI-hungry user base. A record \$21.8B invested in 2025, up 58% in a single year. The foundations are solid. But foundations don't win races - speed and courage does. And right now, Europe is not moving fast enough.

3. We're building great companies and then handing them to the US. Europe matches the US at the starting line. But at breakout stage, US investors outspend Europe 3x. At late stage, it's 9x. Over half of the capital scaling Europe's best AI companies is foreign. We are incubating the future for others to own. That has to stop.

4. The next wave of AI is vertical, applied, and European - if we claim it. General-purpose GenAI? The US won that round. But the next frontier - World Models - is wide open. Also 75% of European AI investment already targets high-value applications in health, energy, defence, and fintech. Europe's edge is clear: dominate in the applications layer - health, energy, defence, fintech - and uniquely positioned to lead in World Models. Two massive prizes. One window. The moment is now.

5. Europe doesn't have an innovation problem or a talent problem. It has a capital problem and a friction problem - and both are fixable. European pension funds sit on €13 trillion, raising their ventures allocation to 3% unlocks €100 billion overnight. Streamline the regulatory stack, scale up EU-Inc into a real tech highway, and Europe's AI pipeline doesn't incrementally improve — it explodes.

State of AI in Europe: Key Insights

Investment & Startups

- European AI VC funding reached an all-time high of \$21.8B in 2025, up 58% from 2024 and nearly 10x the level in 2016.
- AI now accounts for 30%+ of all European VC funding - double the share of three years ago.
- Europe has a comparable number of AI startups to the US but captures only 11% of global AI VC since 2023, vs. 77% for the US.
- The funding gap is concentrated at scale: Europe invests 3x less at breakout stage and 9x less at late stage (\$12B vs. \$141B in 2025).
- Over half of late-stage capital for European AI startups comes from foreign (predominantly US) investors, raising strategic sovereignty concerns.

Talent & Research

- Europe is on par with the US in frontier AI talent - researchers active in industry and academia - with ~133,000 vs. ~556,000 LLM users globally.
- However, 53% of European AI talent sits in traditional economy roles vs. 40% in the US, and only 33% in digital-native tech companies (vs. 46% in the US).
- US AI dominance is built on ~50% imported talent, largely European - but this talent flow is showing early signs of reversal.
- European institutions are absent from the top-cited AI publications, and Europe accounts for just 3% of new global AI patents (vs. 70% for the US and 14% for China).
- Europe shows genuine competitive strength in robotics, AI manufacturing, and deep tech applications such as autonomous driving and AI drug discovery.

Adoption & Application

- AI adoption in most European countries exceeds US levels, making Europe the world leader in AI application uptake.
- Europe records 2x the LLM usage of the US, though the dominant models are US- and China-built - effectively enriching foreign AI ecosystems.
- Over 75% of European AI funding targets vertical, specialist applications - in health, energy, fintech, security & defence, and legal.
- Europe is competitively positioned in applied AI sectors: AI for Energy, Security & Defence, and Health attract strong relative investment.
- Europe trails significantly in foundational model development and AI chip infrastructure, reflecting a structural gap in the compute and model layer.

Geography & Ecosystems

- London is Europe's undisputed AI capital: ~1,700 VC-backed AI startups worth \$125B, raising \$7.1B in 2025 alone - vastly ahead of all other hubs.
- Munich and Zurich lead in deep tech and AI research; Paris is an emerging force, particularly in AI model development.
- London, Munich, Paris, Zurich, Stockholm, Amsterdam, Berlin, Copenhagen, Oxford, and Cambridge form Europe's core AI hub network - but none yet rivals the scale of Bay Area, New York, or Boston.
- Defence, Security & Resilience (DSR) is the fastest-growing AI sub-sector: \$8.7B invested in 2025, up 55% YoY and 4x higher than five years ago.
- The global AI landscape is bifurcating around the US and China, with Europe at a strategic crossroads - the solution, as the data shows, lies in mobilising growth capital at scale.

Europe's contributions in AI are far more significant than people think or report

Mistral is competitive with the best AI labs (and its new app *Le Chat* is very fast...).

LLama, Meta's foundational model, was invented in Paris.

DeepMind is based in London and its founder Demis Hassabis, now Nobel Prize winner, runs Google AI efforts.

Hugging Face

Hugging Face, the heart of the open-source AI community globally was started by French founders.

Europe is producing its fair share of beloved fast-growing AI applications, such as ElevenLabs, Granola, and Lovable.

While China surges, European AI researcher output is holding up

Share of researchers having 1k+ citations, per country of origin

Europe is on par with the US on AI talent

‘US hegemony’ in AI is built on imported talent.

Overall Europe hosts 67k extra-European AI Talent, which make up 21% of the Talent pool.

In comparison, the US host 149k extra-American AI Talent, which make up 45% of the Talent pool.

Share of AI Talent with foreign origins

The tide is turning.

US dominance in AI is fast eroding as the best minds in the field decide to take their skills elsewhere.

The net flow of AI talent from Europe to the US is at its lowest in the last decade.

Europe --> US net AI talent flow

Source: Dealroom.co; 2020-2021 reduction was strongly driven by covid-19 pandemic disruption

Top-100 employers of AI talent in Europe

Traditional economy AI talent employment in Europe across consultancies, industrial groups and finance; not European AI companies

Top 100 organizations for AI talent in Europe

Europe has a massive pool of AI talent, but it is structurally misallocated to traditional economy roles

Europe appears caught in a "retrofitting loop," where its elite talent is utilized to enhance legacy sectors rather than to build the next generation of global tech platforms

The US advantage is mostly driven by Big Tech.

AI talent employed by type of organization, Europe vs US

US Big tech dominates AI talent employment in the US and in Europe

The top 7 employers of AI talent in the US are the Big Tech Mag 7, and just two of the top 15 are old economy companies.

Top employers of AI talent in the US

Comapny	Type	People count	HQ
Google	Mag7	18,040	
Meta	Mag7	16,468	
Amazon	Mag7	12,536	
NVIDIA	Mag7	9,338	
Apple	Mag7	4,268	
Microsoft	Mag7	4,121	
Tesla	Mag7	3,119	
OpenAI	Digital tech native	1,809

1 AI in the news: An American story?

2 **Surprising Truths About a Hidden Giant**

Talent Paradox: Europe on par in "Frontier" Minds

Tech Stack Paradox: Europe as the World's AI "Trainers"

Startup Paradox: Europe Grows Them, America Owns Them

3 Where Europe can win: Picking the Right Battles

4 Way forward

Europe is investing deeply into sovereign compute. But is that really our biggest bottleneck?

Europe hosts approximately

16%

of the world's data centers*

However, when focusing specifically on **AI computing infrastructure**, Europe's share is significantly lower, accounting for an estimated

<5%

of Global AI Compute**

Nevertheless, the EU has emerged as the global leader for provision of AI Compute as a public good. The **Commission is spending €20B to build four to five large-scale AI gigafactories** equipped with approximately 100,000 next-generation AI chips each, aimed at establishing Europe as a global AI leader.

Regional Share of Global AI Compute (H100 equivalents)

Europe has fallen behind in the Generative AI race

Europe is a distant third behind China and the US in the race to build the most advanced LLM models.

Mistral is the only European organization with notable LLM Model release

Europeans lead in the application of AI

AI adoption ('Diffusion') by country, H2 2025

■ +40% ■ 30-40% ■ 20-30% ■ 10-20% ■ 0-10% ■ Insufficient Data

Europeans consume AI brilliantly, but we train the algorithms owned by others.

There are significantly more users of LLMs in Europe than in the USA.

As AI models mature it will be about distribution.

Europe relies on foreign apps for most of its daily lives.

As AI gets embedded into the fabric of these apps, everything we buy and say and hear online will be shaped by models trained abroad.

Total Monthly Average Users (MAU) for vertical apps in Europe
(by the apps' region of origin), Jul 2024 - Sep 2025

1 AI in the news: An American story?

2 **Surprising Truths About a Hidden Giant**

Talent Paradox: Europe on par in "Frontier" Minds

Usage Paradox: Europe as the World's AI "Trainers"

Startup Paradox: Europe Grows Them, America Owns Them

3 Where Europe can win: Picking the Right Battles

4 Way forward

US is far ahead, in funding AI startups.

The US leads as hyperscalers, frontier-model labs, and deep capital markets concentrate funding at scale. Europe and the rest of the world are ramping quickly, driven by catch-up investment, sovereign support, and broader AI adoption across industries.

US vs. Europe: share of venture & AI, 2023-2025

AI funding in Europe is at all-time-high.

Over \$21B invested in European AI startups in 2025, 58% more than in 2024

VC funding in European AI startups

While Europe trails in the first round of general-purpose Generative AI, it is positioning itself to lead the "Next Wave" of specialist, vertical applications.

- **Applications** dominate, making up three-quarter of the funding in Europe in 2025
- **Health, Enterprise software & Media, Defence & security, Robotics, Energy, and Fintech** are the largest application segments
- **AI Data centers** attracted significant funding (e.g. Nscale)
- **GenAI foundational models** attracted significant funding (e.g. Mistral AI)

AI VC funding in Europe by segment (2025)

**European AI
Champions are
now competing
head-to-head
with American
rivals.**

112

\$1B+ companies

135+

With \$100M+ revenue or \$1B+ value

Europe is insanely entrepreneurial: It has lots of AI startups, but lacks breakthrough, mega-scale companies

AI startup funnel for USA vs Europe

Rising Giant: European AI is on the verge of a break out

A record 30%+ of VC funding went into AI in Europe in 2025,
2x more than 3 years ago

Record number of large seed rounds in Europe,
8 out of 10 in AI alone

Company	Round Size	Date
 Advanced Machine Intelligence	\$1.03B	Mar 2026
Ineffable Intelligence	\$1B*	Feb 2026
 H	\$220M	May 2024
 BIONTECH	\$150M	Feb 2008
 general intuition	\$134M	Oct 2025
 newcleo Purifiable Energy	\$118M	Aug 2021
 MISTRAL AI	€105M	Jun 2023
 Genesis AI	\$105M	Jul 2025
 GENERATIVE BIONICS	€70M	Dec 2025
 Gadium	\$70M	Dec 2025

Europe lags growth capital.

Europe is almost on par in early-stage AI funding but invests nearly 3x less at breakout stage, and a staggering 12x less at Late stage.

Without a robust late-stage funding environment, early-stage funding merely serves as an incubator for companies that will eventually be acquired or funded by foreign capital.

AI VC funding by stage Europe vs US

Europe is reliant on overseas capital at the breakout and scaleup stage.

When European startups break through they tend to be commercialized and scaled by American firms.

The financial "value creation cycle" and long-term strategic control flow back to the USA.

Source of VC in European companies, 2024-2025

Later-stage European AI investments is increasingly dominated by US VC firms

Selected US investors in \$100m+ AI rounds in Europe, 2024-2025

1 AI in the news: An American story?

2 Surprising Truths About a Hidden Giant

Talent Paradox: Europe on par in "Frontier" Minds

Usage Paradox: Europe as the World's Biggest AI "Trainers"

Startup Paradox: Europe Grows Them, America Owns Them

3 Where Europe can win: Picking the Right Battles

4 Way forward

Wide Open: Europe's Strategic Opportunities

- 1 **Develop European open-source model alternatives - Trust as Europe's moat (more Mistrais)**
- 2 **Own the Distribution by supporting the formation of competitive pan-European platforms**
- 3 **Build best-in-class vertical AI applications (more Legoras, Lovables)**
- 4 **Go all-in on the next wave of AI: World Models (more AMIs, General Intuitions)**

Where can Europe compete?

European is particularly strong in applied AI sectors such as AI for Energy, Security & Defense, Fintech and Health.

Share of VC funding by region in key AI segments, 2023-2025

Europe is trailing in GenAI, but remains competitive for the next wave in Robotics, Autonomous Vehicles and AI-enabled manufacturing

1 AI in the news: An American story?

5 Way forward

In Summary:

Surprising Truths About a Hidden European AI Giant.

Talent Paradox

Europe Has the Talent.
It's in the Wrong Jobs.

Usage Paradox

Europe Uses AI Most.
But Trains Foreign
Models.

Startup Paradox

Europe Grows Them.
America Owns Them.

Europe is at a crossroad, but reforms need to accelerate

Invest

Mobilize growth capital

UNLOCK European pension funds to participate more in Growth Capital.

CONCENTRATE capital into Europe's leading hubs.

Unify

Eliminate internal friction

SUPERCHARGE EU-INC into a highway for hyperscaling Tech in Europe (by adding stock options, financing, labor laws, etc.) .

EXPAND the EU-INC highway to connect all major European hubs (e.g. UK, Switzerland and EEA markets).

PROMOTE the formation of competitive pan-European platforms

Simplify

Reduce regulatory burden

FAST-TRACK the Digital Omnibus - cut compliance friction, align AI Act timelines with reality, and give European innovators a rulebook they can build on.

ACCELERATE the Digital Fitness Check and opportunities for simplification

The solution to Europe's AI problem is hiding in plain sight: Capital

INVEST: Where the EU's growth capital is hiding

European pension funds

€3-10Tr 120%+

AUM

Funding ratio

High funding ratio
(≥115-120%)

European Insurance Companies

€10Tr 200%+

AUM

Solvency

Low funding ratio
(<100-105%)

Raising VC / Growth allocation from
0.12% to 3% (€100 billion) would
close the gap with US

European AI Hub Power Law: Catching up requires Europe to focus on its top cities.

An AI Powerhouse in Europe.

Prosus is a global technology company, unlocking an AI first world for its 2 billion customers. With investments in more than 100 companies across the world, Prosus builds local ecommerce champions in growth markets.

With leading positions in Food Delivery, Classifieds and Fintech, Prosus has created its own unique technology ecosystem, driving innovation, knowledge sharing and growth across its portfolio.

Through the Prosus Ventures team, the Group invests in new technology growth opportunities within AI, social and ecommerce platforms, fintech, B2B software, logistics, health, blockchain, agriculture and more.

The team actively backs exceptional entrepreneurs who are using technology to improve people's everyday lives.

Global startup & venture capital intelligence platform.

Dealroom.co is a global intelligence platform for discovering and tracking the most promising companies, technologies and ecosystems. Clients include many of the world's foremost organizations such as Sequoia, Accel, Index Ventures, NATO Innovation Fund, NATO Diana, European Defence Fund, ESA, McKinsey, BCG, Deloitte, Google, AWS, Microsoft, Stripe.

Dealroom partners closely with local tech ecosystem development agencies and enablers, to create a comprehensive multi-dimensional blueprint of the tech ecosystem, including capital, talent, innovation, entrepreneurship and overall economic dynamism.

London overperforms in AI x fintech, AI model makers & MLOps and AI-native SaaS

London is the leading AI hub by scale in Europe, but it still has some key areas of specialization:

AI x fintech

London is the leading fintech hub in Europe and in the adoption of AI in the sector. Historical AI successes include Cleo, Quantexa, Onfido, and Accelerant, as well as recent rising stars like Paid AI, Triver, and Finster AI

AI Model Makers and MLOps

London is the base of Google DeepMind, Synthesia, Eleven Labs and several other model makers, as well as MLOps startups such as 11x and V7.

SaaS

London is home to fast-growing AI-native applications such as Lawhive (Legaltech), Tesla (coding), Granola (Enterprise software), Omnea (procurement). Robotics, Energy and Defence are less developed sectors.

London is the **second largest research hub for Google after Silicon Valley**, accounting for almost one-quarter of all global research and three-quarters of the European research force.
London is also the top research hub in Europe for **Meta**, and second one for **Microsoft, and Amazon**

London relative specialization in AI domains
